The problem with the Z card was that it was just too complicated for its own good. daggone góod sound I do some online gaming, and the sounds that come from this card are way better than the built in sound on my mother board. Or, use Mic Monitoring and Stereo Mixing to hear yourself while you record and so that you can hear the effects instantly. It comes with multiple inputs outputs included accessories, but has been tested to ensure basic functionality. It comes with multiple inputs output and two microphone inputs for easy compatibility with various pieces of audio equipment. Perfect card for this type of use if you want an improvement in sound quality over on board sound. This ensures you get great quality effects and audio without affecting your computers processing power. The actual Open Box product máy differ in packaging and included accessories, but has been tested to ensure the fects and audio without affecting your computers processing power.
